

FABRICATION, SHEETMETAL WORK & INSTALLATION

We have an in-house fabrication workshop to meet all your fabrication needs, covering all aspects of heavy fabrication, sheet metalwork and structural steelwork. Our in-house fabrication and welding service means that we can provide a complete and competitive service for your project.

We work on bespoke fabrication projects for a wide range of industries, from railways, marine, leisure, petro chemicals, oil and gas to mining and engineering, working from conception through to completion. We also fabricate batch components for automotive, power generation and the construction industry.

Alken for a complete engineering solution:

- ▶ Operation of both European and ASME IX standards using MIG, TIG and SMAW procedures
- ▶ Kempi welding centres
- ▶ Fabrications up to 10 tonne capacity
- ▶ 350 Ton x 3m Cincinnati Press Brake
- ▶ Edward Pearson CNC Press Brake

We also offer design and build, CNC milling and turning, long lathe turning, laser profiling and cutting services in-house if required for your fabrication project.

Our complete engineering solution gives our customers even greater value, reducing potential supplier and administration costs and project timescales.
