

LONG LATHE & LARGE DIAMETER TURNING CAPACITY

We offer conventional turning and are one of just a handful of engineering companies in the UK that has large diameter turning capabilities and can turn over 11m between centres.

The long bed lathe is specifically for manufacturing longer than average components, for example, as used in the oilfield industry, for drive shafts and mixer shafts, railway axles and pipes up to 35 feet long.

Available as a one-off or multiple-batch order, our long lathe and large diameter turning capacity may also be part of an end-to-end customer project.

Alken for a complete engineering solution:

- ▶ Binns & Berry Trident centre lathe with 1 metre swing over gap, 11.5 metres between centres
- ▶ DSG type 36 & 48 centre lathes
- ▶ Ward, 10, 7 and 5 turret lathes
- ▶ Webster Bennet 48" vertical borer

We also offer design and build, CNC milling and turning, laser profiling, cutting and fabrication services in-house if required for your long lathe/large diameter project.

Our complete engineering solution gives our customers even greater value, reducing potential supplier and administration costs and project timescales.
